

FROM STRATEGIC CONSULTANCY TO CLINICAL TRIALS EFFICIENCY

ONCOLOGY CRO EXPERTS

SGS and SMS-oncology have a successful partnership since 5 years to better serve the Biopharma cancer drug development needs of our sponsors. Both companies ensure a full oncology clinical trial scope of services from consultancy to market dossier submission.

Our commitments: Strategic Directions, Full-Time oncologists, Unique Early Phase Capabilities, Global Monitoring Reach, Specialized Biometrics group, Flexibility & Responsiveness.

SGS is a leading life science CRO providing clinical research, biologics characterization, biosafety, and quality control testing. Delivering solutions in Europe and in the US, SGS provides clinical trial management (Phase I to IV) services encompassing clinical project management and monitoring, data management, biostatistics, PK/PD Modeling & simulation and regulatory consultancy. SGS has its own clinical unit with a total of 88 hospitalization beds in Belgium, two Phase I patients units based in Belgium and Hungary and has a wealth of expertise in: FIH studies, viral challenge testing, biosimilars and complex PK/PD studies. SGS has large data base of investigators and key opinion leaders with a high therapeutic expertise in Oncology, Infectious Disease, Vaccines, and Respiratory.

SMS-oncology is a full service oncology CRO that besides executing clinical operations also provides expert advice on oncology drug development. We are specialized in the execution of early phase oncology and immuno-oncology trials throughout (Western) Europe.

We are unique in that our clinical operations and consultancy services intertwine in what we refer to as our 4D concept: we use our oncology expertise to provide Direction to sponsors along the path of Drug to Data to Dossier. For this, we use our oncology drug development expertise to provide insightful strategic support and turn complex data into meaningful insights before and during study conduct. This helps our sponsors to make informed decisions, mitigate risks, identify opportunities and collect the right data to build the regulatory dossier.
